

WINDSX

TOTAL ACCESS CONTROL

DSX Access Systems, Inc.

The Security Professionals' First Choice.

BILL MONROE
VICE PRESIDENT

"Our employees are the heart and soul of DSX. We are honest about our products and their capabilities. If we say it works... it works!"

DSX has become a leader because we care about our customers. We are driven to design and manufacture the most reliable, easy-to-use security products possible. The integrity of our staff is impeccable. We also hire exceptionally talented people who care about quality as much as we do. When we started out, we had one controller design. We have and will continue to increase our product line to offer controllers for virtually any application. We will make sure DSX controllers are based on sound, proven technology. Our hardware is rock solid and our software is state-of-the-art. If we have a problem, we fix it right away. The first DSX controller installed in 1984 is still operating on-site today. Each and every controller is thoroughly bench tested and then burned in for 24 hours. Since 1984, less than 0.5% of all DSX products have been returned in a year. If all of this doesn't speak to the quality of our product, I don't know what does. DSX offers 24/7/365 technical support to our network of service dealers. We know what it's like to be out at 3 o'clock in the morning and have a technical question that can't wait until the next day. That's why we have our 800-number on every product we manufacture. The technical staff at DSX are highly trained and experienced in handling any question a service technician can throw at them about our products. You will see DSX expand its product offering by embracing new technologies. We have quality people who will make sure we stay up with our customers' needs and adapt appropriately to the changes in the industry. Our past speaks for us. We started in 1984 when security and alarm monitoring was all done by lease lines. Due to our frustration with the inferiority of products available at that time, we decided to find and hire engineers and develop our own controllers. The rest is history.

DSX Access Systems, Inc.

DSX

WinDSX Software

When the job calls for one location, multiple locations or even central station control, WinDSX is the only tool you need. Combined with our non-host dependent, fully distributed processing controllers, WinDSX provides total access control.

- A true 32-bit access control application that works with Windows NT/2000/XP Pro and is available in Microsoft Access and SQL versions.
- WinDSX is capable of controlling one door or an enterprise wide system of thousands of doors with no hidden costs or expensive upgrades as your system grows.
- Utilizes the TCP/IP messaging protocol with your existing LAN/WAN
- Integral Photo ID Badging
- Provides full CCTV Camera Control
- Digital Video Integration
- Workstation Event Routing and filtering Capability
- Alarm Echo (Redundant Off-Site Alarm Monitoring)
- Visitor Management
- Data Import Capability
- Time and Attendance
- Multiple Access Levels per Cardholder

TOTAL ACCESS SOFTWARE

Photo ID Badging

WinDSX offers video imaging, complete with badge printing capability, as a standard feature of the software. Cardholder images, including front and side views, image ghosting, signatures, finger prints, etc., can be imported from a digital camera or captured from a live video source and then stored in the database. Badge templates can then be set up, complete with company logo and other desired text and graphics, for easy badge printing within minutes.

CCTV Control and Digital Video Integration

WinDSX offers real-time, on-screen video along with Pan, Tilt and Zoom features in standard CCTV and digital video integrations. In the Map, a simple click on the camera icon will bring up the CCTV window and eliminate the need for the operator to view multiple screens. The operator can select a camera from a list in the workstation program, or with a single click when handling an alarm. The video recorded with the alarm is also just a click away. Live video can also be used to allow for visual verification of a cardholder, by matching the live video image to the cardholder image in the database, before granting him access.

Interactive Animated Graphical Maps

WinDSX allows for graphical maps to be imported into the system for alarm annunciation and input/output and camera control. Maps are easily accessible from each workstation and show real-time status of input/output icons. In the event of an alarm, the map screen is displayed and allows the operator to resolve the alarm by simply clicking the icon.

AL HAVRILLA
PRESIDENT

WinDSX Standard Features

- Photo ID Badging
- CCTV Control
- Digital Video Integration
- Time & Attendance
- Elevator Control
- Workstation Event Routing
- Interactive Animated Graphical Maps
- Guard Tour
- Who Is In Report
- Permanent & Temporary Access Levels

WinDSX software is designed to be the most reliable, user-friendly access control software you'll ever use.

BART HOLZER
VP SOFTWARE ENGINEERING

"All our support, sales and technical personnel have years of experience in the field. They've been there and done that."

Our experience from the contractor/installation side has given us the knowledge to build equipment that is easy to install and operate. We're really a service company disguised as a manufacturer and that gives DSX an advantage on both sides of the coin. Incorporating design elements and providing technical support drawn from our field experience, results in products that please our customers and help our dealers be successful. From the outset, we have been determined to design and manufacture security products that have the lowest return rate of anyone in the industry. We tend to over engineer DSX products instead of trying to take every short cut to make more money. This shows up in the success and long-term reliability of our competitively priced products working in the field. DSX's tech support people are the best in the business. Their contribution is an important ingredient. It gets back to building a remarkably reliable product. There's not a problem they cannot solve. If you should need them, you won't have to dig in a manual to find our 800-tech support line. It's on every piece of equipment we make! We design WinDSX software to be user-friendly while also providing an incredibly comprehensive interface for access control. Our software is constantly upgraded to take advantage of new technologies and compatibilities as they emerge. You can expect DSX to continue to deliver high quality products that are based on solid technology. DSX is dedicated to continue its present course of designing and manufacturing smart, reliable solutions for today and tomorrow's security challenges.

DSX Access Systems, Inc.

Workstation Event Routing

WinDSX Event Routing allows the user to determine which events are displayed at each workstation. In a system that has two workstations located in two separate buildings, each workstation can be configured to only view events that originate in that building. After hours, one workstation could be shutdown and all monitoring shifted to the other workstation. Alarms that are not acknowledged at one workstation can automatically be routed to a backup workstation.

Elevator Control

WinDSX fully supports floor select elevator control and is capable of providing complete elevator security. The software can enable and disable car call buttons and floor select buttons in each elevator to prevent elevator usage without a card. By setting the passenger's access code (authorization and privileges), the operator is able to limit elevator access by floor, time and day of week.

Guard Tour

The WinDSX Guard Tour feature is a valuable addition to any proprietary guard service. The software allows the user to define a tour for a security guard to follow. The tours can be set up to follow a specific route or be configured for a random tour. The system monitors the progress of the guard through the tour in real time and alerts the operator if the guard fails to arrive at a tour station within the allotted time. All tour activity is automatically logged into history and can be used later to generate reports.

Reliability and durability is built into every product we design and manufacture.

DSX CONTROLLERS

If you're looking for dependability, quality and reliability in an access control system, you've found it. DSX Access Systems has earned a reputation for leading-edge design and rock-solid performance in access panel controllers.

DSX Controllers The scalable DSX-1048 controller allows up to 8 readers to be controlled from one panel. DSX controllers are the foundation of the company and prove to be DSX at its best.

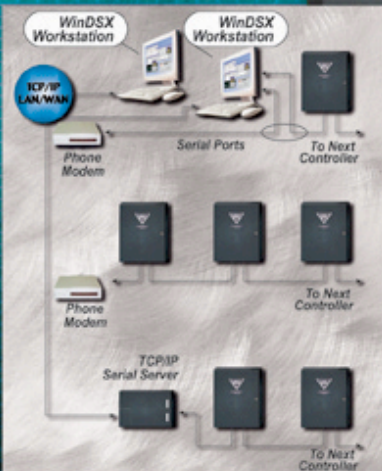

We have engineered what is considered to be the finest in the industry. The DSX software and controllers combine to provide a non-host dependent, fully scalable distributed processing access control system that is incredibly flexible, reliable and user friendly.

WinDSX is access control for systems of all size, from one door to thousands of doors with no hidden cost or expensive upgrades as your system grows. It is a true 32-bit access control application that works with Windows NT™/2000™/XP pro™ and is available in Microsoft Access and SQL versions.

Access Levels WinDSX allows the user to define an unlimited number of access levels and to assign as many access levels as required to each card. WinDSX also provides for Temporary access levels that have start and stop dates associated with each card. Each access level represents a set of Where (Card Reader) and When (Time Zone) criteria that determine the access privileges for the card

SCOTT BENNETT
NATIONAL/INTERNATIONAL SALES MANAGER

Communications WinDSX uses the TCP/IP messaging protocol with your existing LAN/WAN. Communication between the WinDSX software and DSX Controllers can be configured in many different ways. Small systems typically communicate via hard-wired connections. More complex systems may require a mixture of hard wire, fiber optics, phone modems and TCP/IP. DSX has the expertise to tie facilities together when spread across a city, state or even an entire country.

OUR PEOPLE MAKE THE DIFFERENCE.

Since 1984, DSX Access Systems, Inc. has manufactured quality access control products for an ever-changing security market. Today, DSX continues to uphold its reputation for innovative design and rock-solid performance. Our certified dealers are factory trained and provide local installation and service worldwide.

Our uncompromising dedication to engineering and manufacturing excellence, coupled with a commitment to customer support, remains unmatched in the industry. DSX continues to provide state-of-the-art products that truly rise above the competition and are easily customized for individual needs.

By continuously delivering the highest degree of quality and reliability, DSX Access Systems, Inc. remains one of the most respected and trusted names in the security industry.
